

If actual load on tire or axle, and maximum load of tire, is given exact the pressure advice is save.

The maximum load given by the tire-maker is their responsibility, and for some tires this is to high given (low aspect ratio and off-road tires).

Determining the right actual load is your responsibility, and this is often judged to low.

If in red, the pressure is higher then the reference-pressure (maxloadpressure) wich is not the maximum pressure.

TRA allows up to 10 psi more for LT tires and 20 PSI more for Truck-tires, but dont support the higher load then maximum load for speed.

		120 PSI	H-load/16ply								given per tire		For Single-Load		
Max load
