

Seam Treatment Options for
 Structoglas and StructoDecor

Standard Vinyl Moldings

- Professional looking panel installations for maximum moisture sealing effectiveness
- Available in seven colors to match Structoglas colors

Beaded Panel Moldings

- Specially designed division bar with beaded finish
- Standard vinyl moldings for other profiles

Special Color-Matched Decor Trims

- The new and improved trims are more contractor friendly by providing a wider face on the division bar, allowing for easier installation.
- Vinyl trims made to exactly match the product line colors
- Offered in four profiles (Division Bar, Inside Corner, Outside Corner, and Cap)

FLAME SPREAD AND SMOKE DEVELOPMENT RATINGS The numerical flame spread and smoke development ratings are not intended to reflect hazards presented by Crane Composites products or any other material under actual fire conditions. These ratings are determined by small-scale tests conducted by Underwriters Laboratories and other independent testing facilities using the American Society for Testing and Materials E-84 test standard (commonly referred to as the "Tunnel Test"), CRANE COMPOSITES PROVIDES THESE RATINGS FOR MATERIAL COMPARISON PURPOSES ONLY. Like other organic building materials (e.g. wood), panels made of fiberglass reinforced plastic resins will burn. When ignited, frp may produce dense smoke very rapidly. All smoke is toxic. Fire safety requires proper design of facilities and fire suppression systems, as well as precautions during construction and occupancy. Local codes, insurance requirements and any special needs of the product user will determine the correct fire-rated interior finish and fire suppression system necessary for a specific installation.
